2013

Dear Professor Dr Ing Suchy

The lack of technological knowledge management systems in foundries has been a noticeable problem for the past few years. The described simulation process and data management system "SimulationDB" fills the missing link in the enterprise knowledge management system. However, it requires further work and development in order to adapt it to the needs of cast iron foundries, cast steel foundries, and dynamically developing high pressure die casting foundries in particular.

We strongly support your long term involvement in the new trend of technological data management. We declare our willingness to confirm the soundness of your R&D work. We will also support you in disseminating and popularizing systems of this kind around the globe.

Yours sincerely

Eur Ing Andrew Turner FICME
General Secretary
